

Academic Background

Year	Degree/Certificate	Institute	CPI/%
2026 (Expected)	B.E., Computer Science	Chandigarh University, Punjab	7.69/10

Skills

- **Languages:** C++, TypeScript, JavaScript, SQL, Python.
- **Technologies:** TensorFlow, Docker, Apache Spark, Redis, WebSockets, React, Tailwind, Prisma, PostgreSQL, MongoDB, Git.
- **Platforms & Cloud:** AWS Cloudflare, Vercel, Render.
- **Specialities:** Agentic AI LLM Ops, RAG / Self-RAG, Real-time data pipelines (multi-GB/s), Retrieval search systems, Cryptography (AES-256), Distributed systems, Observability & production debugging.
- **Courses:** Cohort 2.0 0-100 100xDevs, CTO Career Guide, DeepLearning.AI Supervised ML, Intermediate Python, C++ OOPs, AI Foundations: Machine Learning, DL Optimization, RL Foundations, Training Neural Networks, and Data-Driven Product Management.

Work Experience

Founder / Lead ML Engineer (Dec 2024 – Present)

ClarigenAI (C.L.A.R) — AI-native legal compliance agent (Stealth)

- Leading development of **C.L.A.R**, an agentic workspace assistant that automates legal, HR and compliance workflows with secure tool execution, structured reasoning and auditable outputs.
- Designing end-to-end pipelines: retrieval, RAG, tool wrappers, execution orchestration, prompt/slot management, and observability for enterprise-grade auditability.
- Implementing secure data handling, role-based access, and encryption for sensitive documents; building CI/CD and infra hardening to support multi-tenant pilots.
- Early pilot metrics show significant reductions in manual review cycles and document handling time (measured efficiency gains in scoped pilots).

Agentic Trading Systems Engineer (Contract / Independent) (Jul 2024 – Nov 2024)

Autonomous Web3 / Quant Intelligence Engine

- Engineered an **agentic Web3 quant intelligence engine** to autonomously analyse market trends, on-chain signals, news feeds and 147+ technical indicators for portfolio decisions and automated rebalancing.
- Built a high-throughput ingestion pipeline and custom time-series storage capable of sustained **11 GB/s** market data ingestion for real-time decisioning and historical backfill.
- Implemented risk-aware execution modules, volatility-aware position sizing, and automated portfolio rebalancing workflows with fully auditable action logs.
- Developed backfill, reconciliation, and streaming aggregation modules to ensure data integrity and deterministic strategy replays.

Co-founder / ML Engineer (Mar 2024 – Sep 2024)

KarmicDD — Agentic due-diligence validation platform (Startup project)

- Co-designed agentic due-diligence pipelines that ingest documents, extract structured facts, and generate audit-ready reports for finance and compliance teams.
- Built agent-tool orchestration, tool wrappers, and failure-recovery strategies to improve multi-step pipeline reliability and observability.
- Implemented RAG-based knowledge retrieval and fine-tuned domain models for higher contextual accuracy in legal/financial workflows.
- Integrated index/versioning and document provenance features to support traceability and governance.

Software Developer Intern (Jun 2024 – Nov 2024)

Kishvi Studio Digital Agency

- Designed and implemented a scalable transaction system using **WebSockets** and **Express servers** to queue and process transactions, improving throughput and reliability.
- Developed and deployed a real-time broadcast server to enhance large-scale data dissemination and internal system latency.
- Built a real-time telemetry and observability system for actionable insights and accelerated debugging workflows.

- Implemented a microservices API Gateway, optimising throughput and resource usage; developed an AES-256 encryption portal with advanced key management.

Machine Learning Engineer Intern

(Aug 2023 – Jan 2024)

WanderMore AI

- Fine-tuned LLMs using **RAG** / **Self-RAG** techniques to improve itinerary generation accuracy by 35%.
- Built Serper-powered internet context pipelines and a token-cost logging system to monitor inference costs and improve prompt efficiency.
- Engineered concise prompt templates and user flows that increased engagement and reduced hallucination rates in production chat flows.

Projects

My Encryption App [Live](#) [↗](#)

Nov 24 [GitHub](#) [↗](#)

- Designed a secure message encryption and decryption web app with React and Node.js, featuring JWT-based authentication and AES-256 encryption support.
- Implemented QR code generation for encrypted data and multi-algorithm encryption flows to ensure robust security and usability.

Paytm Clone [Live](#) [↗](#)

Oct 24 [GitHub](#) [↗](#)

- Developed a full-stack payments clone with secure authentication, transaction management, and account monitoring using React.js, Express.js and MongoDB.
- Implemented transaction history, balance checks and fund transfers with attention to UX and reliability.

Spacecraft Trajectory Prediction Model

Sep 24 [GitHub](#) [↗](#)

- Built an ML model using TensorFlow to predict spacecraft trajectories from time-series telemetry, improving positional accuracy with hybrid architectures.
- Visualised and analysed results with Matplotlib; applied advanced optimization techniques to increase model robustness.

Credibly — YouTube Learning Validation (Hackathon)

2024 [GitHub](#) [↗](#)

- Built a platform to convert educational videos into structured courses, auto-generate AI quizzes and mint certificates on-chain for verified learners.
- Implemented automated question generation and on-chain certificate minting; contributed to front-end and backend integration.

Achievements

- Secured 2nd place at TON Gurugram BootCamp, winning **1500 USD in USDT**.
- Achieved **All India Rank 5** at **IDEATHON-2023**, competing against **500+ teams**.
- Ranked among the **Top 30 Teams** for **Smart India Hackathon (SIH)**.
- Finalist at **National Students' Space Challenge, IIT Kharagpur**.
- Finalist at **BaseIndia**, competing against **200+ teams**.
- **LinkedIn Ambassador (2024-2025)**.
